## VINIFICATION

The 4 varieties that had the best vegetative behavior and that are representative of the harvest year are chosen. As soon as the grapes arrive at the winery, they are pressed and then the musts are statically cleared, under the influence of the cold. Selected yeasts are then inoculated and alcoholic fermentation begins in stainless steel tanks. Fermentation takes place in the cold room at a controlled temperature of 12°C to 13°C.

## TASTE

A citrus-toned wine with hints of tropical fruit, a slight quince jam and mineral notes. Elegant on the palate, it shows good acidity and a remarkable structure, which prolongs the tasting.

## LONGEVITY

+ than 3 years

## HOW TO SERVE

7°C a 9°C
